config.json is a JSON file.

```json
{
 "socketURL": "/",
 "dirPath": "",
 "homePage": "/demos/index.html",
 "socketMessageEvent": "RTCMultiConnection-Message",
 "socketCustomEvent": "RTCMultiConnection-Custom-Message",
 "port": "9001",
 "enableLogs": "false",
 "autoRebootServerOnFailure": "false",
 "isUseHTTPs": "false",
 "sslKey": "./fake-keys/privatekey.pem",
 "sslCert": "./fake-keys/certificate.pem",
 "sslCabundle": "",
 "enableAdmin": "false",
 "adminUserName": "username",
 "adminPassword": "password"
}
```

PFX on windows? i.e. SSL on windows:

```json
{
 "isUseHTTPs": "true",
 "sslKey": "/ssl/server.pfx"
}
```

dirPath is recommended to be an absolute path. However relative paths are also accepted. dirPath stands for HTML directory path.

```
{
  "dirPath": "/var/www/html/"
}
```

Keep dirPath empty to force same directory: (i.e. process.cwd())

```
{
  "dirPath": ""
}
```
